

*Mastec is an industrial group consisting of 6 manufacturing companies. We offer manufacturing within: injection molding, turning/ milling, sheet metal manufacturing, surface treatment, assembly. We can as one supplier solve your various manufacturing needs. For further information please see [www.mastec.se](http://www.mastec.se)*

# MASTEC Plastema

## Your partner in plastic manufacturing

### We can offer our customers short lead times

A well-functioning production unit with high automation and a well-functioning supplier network mean that we can keep short lead times for our customers

#### **3-D printed prototypes**

**Injection moulded prototypes 5 – 6 weeks**

**First parts out of a new serial tool(injection moulding) 10 – 12 weeks**

**We are also working with transfer of existing tools**

### Quality

We work continuously with 5S and LEAN.

Our quality work is deviation-driven and this means that we catch up on any problems and solve them quickly and efficiently.

The result of this is that we have a high delivery precision and a high quality outcome for all our customers

**Delivery precision Jan 2019 – Jun 2019 100%**

### Together we can lower your costs

With our experience early in the project, we can help with the choice of material and optimize the geometry of the details for injection molding

We are happy to help you develop your existing products. For example, you may want to go from castings or machined metal to injection molded plastic to save both weight and cost.
